

Afghanistan Floods and Landslides

Area	Northeastern, northern and western Afghanistan	Death toll*	225
	Northeast (Badakhshan, Takhar and Baghlan provinces) Northern (Faryab province), Western (Galle province)		
Period	May 10-18, 2024		
Outline	Areas where soil had been too hardened for infiltration due to three consecutive years of drought, were hit by heavy rains from April onward, causing flash floods and river overflows; the May floods caused extensive damage to houses, irrigation facilities, and farmland, especially in the northern and northeastern regions.	Missing*	—

*Number of victims is based on UN OCHA report of June 6, 2024.
